

# Remote Solutions

## Access your CMS applications Anytime, Anywhere.

The work of the church happens in many places besides the office. Now your software can be as mobile as your staff and your ministries. And with a secure Web login, you'll always have access to your family, member and financial records—wherever you may be.

Remote Solutions hosts your CMS Family Suite and Church Accounting Products on a secure server that runs your calculations, keeps your data safe and makes it all available to you anytime, anywhere via the Internet.

### Boost productivity

- Log in to the same Church Management Software (CMS) programs you know and trust from any location, with all of the functionality you enjoy from your office desktop.
- Free your staff to work from any location with Internet access.
- Get the same great software performance with maintenance-free hosting by CMS.

### Get information—when and where you need it

- Improve decision-making when you can check facts and figures online from an offsite meeting, home office, or active service location in the community.
- Manage religious education records from your classroom location.
- Register families or update records directly in your system, rather than printing and distributing paper forms.

### Save money, improve security, reduce risk

- Eliminate the hassle and expense of database backups, software updates, server maintenance and virus scanning—CMS's Remote Solutions manages all of this infrastructure for you.
- Protect your data against PC failures, server problems or disasters.
- Maintain complete control over who can access your records—encryptions, firewalls and multi-layer access controls ensure that only your authorized users will have access to your database from their personal logins.

# Remote Solutions

**Remote Solutions offers true mobility  
with data protection you can trust.**

**Serious security, reliability, and data continuity**

## **Is it safe to host your data with Church Management Solutions?**

Absolutely. The safekeeping of your data is a critical component of our mission to listen, to provide you with the best technology available, and to earn your trust as we help you accomplish your goals. When you use Remote Solutions, your church records are protected by encryptions, advanced network firewalls and multi-layer access controls. Nightly backups are taken offsite from our data center.

All this protection means that your database is secure on the Web, and only the users authorized by your church administrator will have access to your information from their personal logins. In addition, it guarantees that your database is safe from the unexpected, so if fire, theft or natural disaster strikes, or if your office computer fails, you can get back up and running right away with your records intact.

## **Can I use my software programs anytime?**

Indeed. The same safeguards that protect your data also keep your hosted applications running smoothly and without interruption. Just log in from your Web browser and use your CMS, accounting, Microsoft® Office™ or any other hosted programs—just like you would if you were at your own desk in the church office. Once you log in, all of the functionality works exactly the same as if your programs were installed on your PC.

Software applications are hosted on fault-tolerant, high-performance server clusters to provide enterprise-class reliability to churches of all sizes. With clustering, CMS systems work around hardware failures instantly and automatically, activating backup systems to keep your data accessible 24/7.

## **Greater protection through hosting**

CMS's top-of-the-line data center provides true enterprise-class scale and reliability. In addition to the standard safeguards described above, our Remote Solutions delivers many additional benefits not typically available to churches that host their own applications and data, including full-time security personnel, closed-circuit video surveillance, biometric bone-scanning identity verification systems, continuous and redundant power systems with back-up generators, fully redundant network systems with multiple-backbone access, smoke detection and fire suppression systems, and flood detection and avoidance systems.

## **Complete Church Solution**

*Church Management Solutions (CMS) provides a complete suite of products that help churches manage organizations, people, finances and reporting from a single database. Remote Solutions is a Web-hosting service that provides anytime, anywhere access to CMS programs.*
